                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Clery Nation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 8 C. FUNCTION: MAY PLAY A RCLE IN ALTERING THE PROPERTIES OF CELL
WALLE DIRING GERMINATURE GROWTH.

C. STEDNIT: GLIGOWER (BELLEVE) TO BE A PENTAMER BUT PROBABLY
HEXAMER: LBY SIMILARITY:

C. STEDLULIAR: GROWTH (BELLEVE) TO BE A PENTAMER BUT PROBABLY
HEXAMER: LBY SIMILARITY:

C. STRUCTURIAR: GROWTH (BELLEVE) TO BE A PENTAMER BUT PROBABLY
HEXAMER: LBY SIMILARITY:

C. STRUCTURIAR: GROWTH (BELLEVE) TO THE TIP. IN ROOTS AND DECREASED BY SALT
STRESS IN CLEAFFILE.

C. SIMILARITY: GELOWIS TO THE GERMIN FAMILY.

RINGERTO: DECREASED BY SALT STRESS IN ROOTS AND DECREASED BY SALT
C. SIMILARITY: GELOWIS TO THE GERMIN FAMILY.

RINGERTO: DECREASED BY SALT STRESS IN ROOTS AND DECREASED BY SALT
C. SIMILARITY: GELOWIS TO THE GERMIN FAMILY.

REPETO: DECREASED BY SALT STRESS IN ROOTS AND DECREASED BY SALT
C. SIMILARITY: GELOWIS TO THE GERMIN FAMILY.

RINGER: DECREASED BY SALTIAL.

REPORT: DECREASED BY SALTIAL.

REPORT: DECREASED BY SALTIAL.

WARDERSEL CONTROLLING BY SALTIAL.

(e.g. macrocalceules, polymers, defaditimers, processins) to produce biological and immunological constructs. The invention provides a method for linking an epitope (e.g. a peptide) to a carrier (e.g. a protein) for use in a pharmaceutical composition or a vaccine. The invention describes peptides derived from or mimotopes of the linking are produce conjugated compounds. The compounds or compositions of the invention are useful in the manufacture of a compositions of the invention are useful in the manufacture of a compositions of the invention are useful in the manufacture of a compositions of the invention are useful in the manufacture of a compositions of the invention are useful in the manufacture of a protein so as to form an immunogenic conjugate which may be able to protein a protective antibody response in an animal or human patient. AAU16613 represent peptides derived from or minotopes of the Cepsilon2/Cepsilon3/Cepsilon4 region of human 196.
                                                                                                                                                                                                                                                                                                                A linkage comprising an immunogenic conjugate useful treatment of 195
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

preventing and treating infectious diseases such as malaria or chronic disease such as cancer, Alzherek's disease or allergy in a patient. Unlike prior art immingens, (1) induces high levels of antipeptide immune responses while inducting a moderate humoral response against the carrier. The present sequence represents a specifically claimed mimotope peptide sequence, which can be used in an immunogen of the

The present invention describes a peptide (1) corprising an isolated immunoglobaline 1 (1) of Cepsilon-2 domain (1) of financhoglobiline 1 (195) of Cepsilon-2 domain (1) of the manneglobiline 1 (195) of its miniotope. Also described are: (1) an immunoglobiline 1 (195) of the manneglobiline (1) of the area of allery comprising (1); (2) a vaccine (1); for treating alleryies comprising (1); (3) a ligand (10) capable of the manneglobiline (10) comprising (10); (4) a pharmaceutical composition (10) capable of the manneglobiline (10) an immunol-1 (1) a section of the manneglobiline (1); (1) by producing (11); by producing (11); or have antiallorged and immunosuppressive activities, and can be used as a vaccine and best and immunosuppressive activities, and can be used and preventing alleryies (10); (11) and (11) are useful in medicine and also in manfacturing medicaments for treating and preventing also in manfacturing medicaments for treating of (1); and of the area of the contribution of the contribution of the contribution and also in manfacturing medicaments for treating of (11); and (12) are contributed to the contribution and also in manfacturing and in the affinity medicine and also in manfacturing and in the affinity medicine and also in manfacturing and in the affinity of the affinity o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               allergies. (i) is mertul in diagnostics and in the affinity purification of circulating anti [4E artibodies from blood. (I), (III) and PC are associated to critering from a lettles susceptible to or suffering from a lettles. (IV) is also useful to diagnostic atopia AAB25907 to AAB2609 retressing peptide sequences which are used in the exemplification of the prosent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ::

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a composition comprising allergy peptides are derived peptides are derived by an inext carrier. The allergy peptides are derived from Immunoglobulin B (198) or 198 receptor. The present peptide is one such peptide from 198. The composition is useful as a vaccine or for manufacturing a medicament for the prophylaxis or treatment of allergy. In particular, for boosting an anti-allergy immune response in an individual susceptible to an allergic response.
Cepsilon2, Cepsilon3 or Cepsilon4 regions of human immunoglobulin E
ligE) which are used to produce conjugated compounds. The compounds or
compositions of the invention are useful in the manufacture of a
nedicament for the treatment of igE mediated diseases. The invention
allows for controlled conjugation of a peptide epitope (antigen) to a
protein so as to form an immunogenic conjugate which may be able to
protein so as to form an immunogenic conjugate which may be able to
halled? AAU1642 AAU1693 represent poptides derived from or human patient
the Cepsilon2/Capsilon3/Cepsilon4 region of human lgE.

                                                                                                                                                                                                                                                                                                                                                                                                           Ċ
                                                                                                                                                                                                                                                                                                                   The present invention relates to conjugative satisfies for use in vaccines, where the conjugate comprises a disalphide bridge cyclised piguide and an emmission catalogue. The vaccines can be used in the true-ment of all allergies. The present sequence is a periode immission derived the human immission. It is 1955 suitable to be cyclised and used in the invention.

The present invention relates to conjugates suitable for use in vaccines, where the conjugate comprises a dissiphide bridge cyclised peptide and an immingenic carrier. The vaccines can be used in the treatment of allergies. The present sequence is a peptide imminogen derived from human imminoglobulin E (19E) suitable to be cyclised and used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Saps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Epitope, mimotope, human, immunogiobulin E, IgE, C-epsilon-2 domain,

                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a peptide (1) computating in solated surface exposed group/epitope (2) of C epition-2 demain (2) of immunoglobulin E (196), or its minotopo, Also described are; it an immunoglobulin E (196), or its minotopo, and or described are; it an immunoglobulin E (196), or its minotopo, and a vaccine (11) for treating allergies comprising (12), (3) a 1990d (10) capable of the manaceutical composition (10) capable of (11) and (11) by producing (11), (3) a peptide (13) and (7) producing (11) by producing (11), (1) can have antial region of (7) producing (11) by producing (11), (1) and (11) are useful in medicine and in the manufacture of medicaerins for treating and vaccine and also in manufacture of medicaerins for treating and also in manufacture of medicaerins producing participation (1) in medicine and also in manufacture of medicaerins for treating allergies. (1) is useful in diagnostics and in the affinity purification useful for treating and patient susceptible to consultating from allergies. (10) is also useful in diagnosing doppy, AARSS907 to AARBSC09 sepreesent (10) peptide sequences which are used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                             ö

The greener sequence is a peptide immunogen derived from immanoglubulin 8 (198 suitable to be cyclised and used in the invention.
                        conjugation of compounds (e.g. peptides) to darrier vehicles

(e.g. macromolecules, polymers, dendrimers, proteins) to produce

bloiggical and immunological constructs. The invention provides a

method for linking an epitope (e.g. a peptide) to a carrier (e.g. a

protein) for use in a pharmaceutical composition or a vaccine. The

content of a control of the invention or mimotopes of the

compositions of the invention are useful in the manufacture of a

compositions of the invention are useful in the manufacture of a

medicament for the treatment of 1ge mediated diseases. The invention

allows for controlled conjugation of a peptide epitope (antigen) to a

control of or man immunogenic conjugate which may be able to

raise a protective antibody response in an animal or human patient.

AAU:6612-AAU:16911 represent peptides derived from or mimotopes of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
